Indo-European matters even more

University of Copenhagen, 13 October 2011

In this paper I am going to present an attempt at a solution of four of the most difficult individual problems in Slavic historical morphology:

- 1 CS *o*-stem masc. nom. sg. *-b
- 2 CS *ā*-stem gen. sg. *-y
- 3 CS *ā*-stem nom. pl. *-y
- 4 Old North Russian masc. nom. sg. -e

The solution I am proposing requires clarification of some other problems, including the following:

- 1 Old North Russian *ā*-stem gen. sg. -ě
- 2 Old North Russian *ā*-stem nom. pl. -ě
- 3 CS *o*-stem masc. nom. pl. *-i
- 4 CS *e/o*-vb. ipv. 2/3 sg. *-i

Most of what I say has been said before. What is new in my proposal is that I subsume individual solutions to several seemingly individual problems under one pre-Proto-Slavic phonetic change (*R* = resonant, *S* = fricative):

$*\check{a} > \text{Proto-Slavic } *ǎ / _ (R)S$
